SAVE BROAD RIVER

A massive industrial project is moving forward in Franklin Springs—**without public input or transparency**. Plans include a **Pilgrim's Pride chicken rendering plant, dozens of acres of waste storage ponds, and a 4-million-gallon-per-day wastewater treatment facility**, all of which threaten to release harmful air pollution and wastewater into the surrounding environment.

This development was planned behind closed doors by a handful of local officials, using deceptive tactics to bypass public oversight.

If built, this facility will permanently impact:

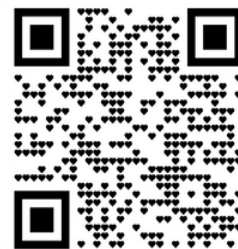

- Our communities' homes, health & water supply
- Everyone downstream—7 counties impacted: Stephens, Franklin, Madison, Elbert, Oglethorpe, Wilkes, and Lincoln
- And the Broad River ecology—one of Georgia's cleanest rivers

Even under ideal conditions, wastewater discharge can cause **eutrophication, oxygen depletion, toxic contamination, and irreversible harm** to river ecosystems. Add to that the risk of **airborne pollutants from rendering operations**, and the danger grows—even if everything runs “perfectly.”
